Traitement

Pour assurer la pérennité du bois en extérieur, nous traitons nos produits en autoclave. Ce procédé d'imprégnation du bois par vide et pression permet d'avoir un traitement du bois par des agents conservateurs non toxiques. Ce traitement permet au produit d'être protégé contre les insectes, les pourritures, les champignons et les termites dans les conditions d'utilisations de sa classe (III ou IV).

Modularité

Ce carré potager a été créé afin de pouvoir s'adapter à vos besoins. De part son système d'emboîtement, les lames peuvent être assemblées selon vos envies et permettent de créer une multitude de potager.

Trois assemblages vous sont proposés dans cette notice, vous laissant la possibilité de trois potagers différents ou bien de créer le votre.

Entretien

Le bois est un matériau naturel vivant, dont les dimensions, aspects, masses, formes et teintes peuvent évoluer, sans modifier les propriétés ni la fonctionnalité et la qualité du produit. Le bois subit un processus de grisaillement naturel au fil du temps qui nécessite un entretien régulier.

Entretien à l'eau 1 fois/an contre les éventuelles traces de mousse.

Possibilité de raviver la couleur avec un dégriseur et d'appliquer 2 nouvelles couches de lasure aqueuse 1 fois/an sur les produits lasurés.
